

10067
Regolith Breccia
69.3 grams

Figure 1: Photo of 10067,3. Sample is 3.5 cm across. NASA S76-21923.

Introduction

10067 is a typical Apollo 11 soil breccia.

Petrography

Carter and McGregger (1970) and Keil et al. (1970) briefly mentioned 10067 in their study of Apollo 11 regolith breccias.

Chemistry

The composition of 10067, as reported by Goles et al. (1970), seems to have more FeO than Apollo soils (figure 3).

Processing

Apollo 11 samples were originally described and cataloged in 1969 and “recataloged” by Kramer et al. (1977). There are 4 thin sections.

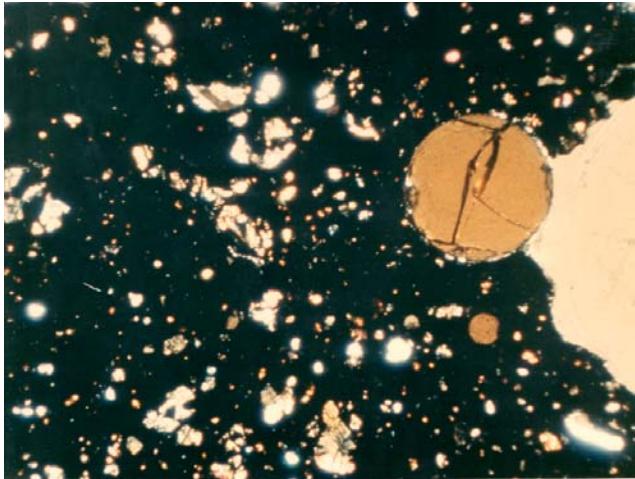

Figure 2: Photomicrograph of thin section 10067, showing orange glass bead in breccia matrix. NASA S70-50554. Field of view is 2.5 mm.

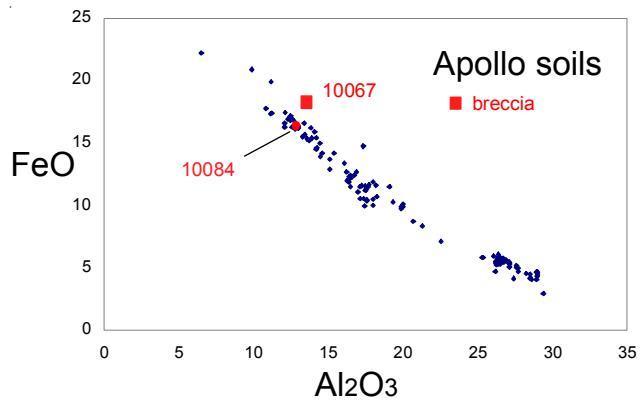

Figure 3: Composition of 10067 (Goles et al. 1970).

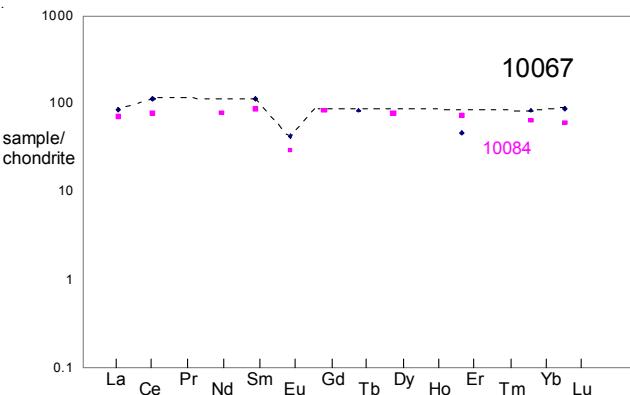

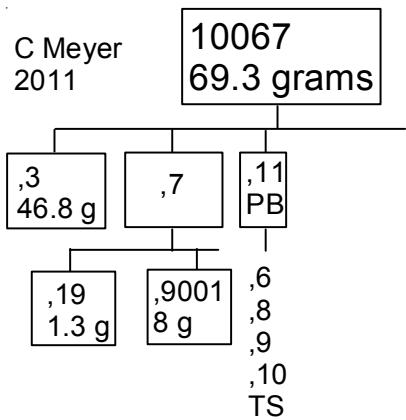

Figure 4: Normalized rare earth element diagram for breccia 10067 compared with soil 10084 (data from Goles et al. 1970).
